

# DAVID JEREMIE ANAND

Applied AI | Agentic Systems | Data and Workflow Solutions

New Delhi, India | +91 70118 90891 | jerryanand10@gmail.com | davidjeremieanand.com | LinkedIn | GitHub

## Profile

Engineering and operations professional building towards applied AI. Two years at Genpact turning tangled workflows into measurable results – **18% faster turnaround, 30% fewer defects, 22% productivity uplift** – and now bringing the same rigour to self-directed AI projects in agentic RAG, multi-agent reasoning, and LLM evaluation, each backed by tests and CI. Currently pursuing a PGP in Applied AI and Agentic Systems at Masters' Union, working towards building AI solutions to real operational problems.

## Professional Experience

### Genpact

Aug 2024 – Aug 2026

Associate and Subject Matter Expert – Operations

New Delhi, India

- Analysed high-volume workflows and drove process redesign, contributing to an **18% reduction in turnaround time** and higher throughput.
- Ran structured root-cause analysis of recurring defects and SLA deviations, tracking issues through Buganizer and validating corrective actions, contributing to a **30% reduction in operational defects** with minimal SLA breaches.
- Automated management reports and dashboards in Excel and Power BI, cutting recurring reporting effort by **25%**.
- Partnered with Risk, Compliance, and Quality stakeholders on controls and workflow improvements, contributing to a **22% productivity uplift**.

## Technical Projects

### FirstLine – AI Ops Triage Agent with Self-Scoring Evals [GitHub](#)

Python, FastAPI, Ollama/Groq, pytest, GitHub Actions

- Built an agentic first line of support that works a full ops shift – classifying root causes across 15 incident archetypes, clustering cross-service incidents, tracking SLA clocks, escalating judgment calls, and drafting RCAs – over a seeded simulator with hidden labeled ground truth.
- Designed an eval harness that grades the agent against that truth (triage accuracy, missed POs, escalation precision); live Llama 3.2 runs surfaced **100% escalation recall at 21% precision** – safety by crying wolf; shipped with a **768-test CI suite** and a live triage dashboard.

### Synapse – Agentic RAG Document Assistant [GitHub](#)

Python, FastAPI, FAISS, Ollama/Groq, pytest, GitHub Actions

- Built a hybrid retrieval pipeline (BM25 + FAISS fused via Reciprocal Rank Fusion, LLM listwise reranking) feeding a 4-stage agent pipeline (planner, retriever, synthesizer, critic) that grounds answers in evidence and self-critiques unsupported claims.
- Added an observability UI and an automated eval harness for retrieval and faithfulness scoring, plus a pluggable model backend (local Ollama / hosted Groq); shipped with a **31-test CI suite**, deployed on Render.

### Ledgr – AI-Powered Finance Manager [GitHub](#)

Python, Flask, SQLite, OpenAI/Ollama, Docker

- Built a full-stack finance tracker with dashboards, budget tracking, and CSV import/export, plus AI transaction categorisation (concurrent LLM calls with keyword fallback) that works fully offline.
- Designed a tool-calling assistant that queries real transaction data instead of relying on LLM arithmetic, with a pluggable OpenAI/Ollama backend; shipped with a **58-test CI suite**, Dockerised, deployed via Render Blueprint.

### PromptDrift – LLM Prompt Regression Testing [GitHub](#)

Python, asyncio, Ollama/Groq, pytest, GitHub Actions

- Built a CLI that snapshots prompt behaviour into a committed baseline and fails CI when a change degrades it, sampling every case repeatedly so genuine regressions are separated from model non-determinism.
- Tiered assertions run deterministic checks before paid LLM-as-judge calls, cutting evaluation cost; shipped with a **157-test CI suite** across Python 3.10–3.13, running fully offline through a deterministic mock backend.

### Wireless Temperature Detection System using HackRF One

RF and Wireless Systems

- Built an RF prototype on HackRF One implementing the end-to-end SDR chain – capture, filtering, demodulation, decoding – to read remotely transmitted temperature signals, validating decoded readings against a reference sensor.

## Internships

### Bhagwan Parshuram Institute of Technology, GGSIPU

Jul 2023 – Aug 2023

Data Analytics Intern

New Delhi, India

Certificate

- Analysed institutional datasets in Python and Excel and built KPI dashboards and automated reports, cutting repetitive manual effort by **25%**.

### Defence Research and Development Organisation (DRDO)

Jul 2022 – Sep 2022

Research and Development Intern

India

Certificate

- Supported development, validation, and signal analysis of an embedded wireless sensing prototype, improving reliability and reducing errors.

### AGIXURY

Sep 2020 – Oct 2020

Web Development Intern

Remote

Certificate

- Developed responsive web interfaces from business requirements and improved usability across desktop and mobile layouts.

## Education

### Masters' Union

Aug 2026 – Present

PGP in Applied AI and Agentic Systems

Gurugram, India

### Bhagwan Parshuram Institute of Technology, GGSIPU

2020 – 2024

B.Tech in Electronics and Communication Engineering

CGPA: 8.53/10.0

### Faith Academy Senior Secondary School, CBSE

2018 – 2020

Class XII: 92.8% | Class X: 94.2%

New Delhi, India

## Technical Skills

### Programming and Data

Python, SQL, FastAPI, Flask, data analysis, data cleaning, exploratory data analysis

### Applied AI

Machine learning, generative AI, agentic AI, large language models, prompt engineering, Retrieval-Augmented Generation (RAG)

### AI Systems and Cloud

Vector databases (FAISS), LLMops, GenAIOps, Microsoft Azure AI, Snowflake, model APIs, data engineering foundations

### Analytics and Development Tools

Power BI, Tableau, Advanced Excel, Git, GitHub Actions, Docker, pytest, VS Code

### Delivery and Problem Solving

Root-cause analysis, stakeholder communication, process improvement, workflow optimisation, customer-focused problem solving

## Selected Certifications

### Professional Certificates

Snowflake Generative AI | Microsoft Azure AI Essentials | Astronomer Data Engineering Foundations

### AI Engineering

Become an AI Engineer | GenAIOps Foundations | Generative AI in Cloud Computing

### LLMs and RAG

Fine-Tuning for LLMs | Advanced LLMs with RAG | Vector Databases and RAG | AI Ecosystem for Developers
