

DAVID JEREMIE ANAND

Applied AI | Agentic Systems | Data and Workflow Solutions

New Delhi, India | jerryanand10@gmail.com | davidjeremieanand.com | [LinkedIn](#) | [GitHub](#)

Profile

Engineering and operations professional building towards applied AI. Two years at Genpact turning tangled workflows into measurable results – **18% faster turnaround, 30% fewer defects, 22% productivity uplift** – and now bringing the same rigour to self-directed AI projects in agentic RAG, multi-agent reasoning, and LLM evaluation, each backed by tests and CI. Currently pursuing a PGP in Applied AI and Agentic Systems at Masters' Union, working towards building AI solutions to real operational problems.

Professional Experience

Genpact Aug 2024 – Aug 2026
Associate and Subject Matter Expert – Operations New Delhi, India

- Analysed high-volume workflows and drove process redesign, contributing to an **18% reduction in turnaround time** and higher throughput.
- Ran structured root-cause analysis of recurring defects and SLA deviations, contributing to a **30% reduction in operational defects**.
- Automated management reports and dashboards in Excel and Power BI, cutting recurring reporting effort by **25%**.
- Partnered with Risk, Compliance, and Quality stakeholders on controls and workflow improvements, contributing to a **22% productivity uplift**.
- Documented process gaps, tracked issues through Buganizer, validated corrective actions, and maintained minimal SLA breaches.

Technical Projects

Synapse – Agentic RAG Document Assistant [GitHub](#) *Python, FastAPI, FAISS, Ollama/Groq, pytest, GitHub Actions*

- Built a hybrid retrieval pipeline (BM25 + FAISS fused via Reciprocal Rank Fusion, LLM listwise reranking) feeding a 4-stage agent pipeline (planner, retriever, synthesizer, critic) that grounds answers in evidence and self-critiques unsupported claims.
- Added an observability UI and an automated eval harness for retrieval and faithfulness scoring, plus a pluggable model backend (local Ollama / hosted Groq); shipped with a **31-test CI suite**, deployed on Render.

Ledgr – AI-Powered Finance Manager [GitHub](#) *Python, Flask, SQLite, OpenAI/Ollama, Docker*

- Built a full-stack finance tracker with dashboards, budget tracking, and CSV import/export, plus AI transaction categorisation (concurrent LLM calls with keyword fallback) that works fully offline.
- Designed a tool-calling assistant that queries real transaction data instead of relying on LLM arithmetic, with a pluggable OpenAI/Ollama backend; shipped with a **58-test CI suite**, Dockerised, deployed via Render Blueprint.

PromptDrift – LLM Prompt Regression Testing [GitHub](#) *Python, asyncio, Ollama/Groq, pytest, GitHub Actions*

- Built a CLI that snapshots prompt behaviour into a committed baseline and fails CI when a change degrades it, sampling every case repeatedly so genuine regressions are separated from model non-determinism.
- Tiered assertions run deterministic checks before paid LLM-as-judge calls, cutting evaluation cost; shipped with a **157-test CI suite** across Python 3.10–3.13, running fully offline through a deterministic mock backend.

Wireless Temperature Detection System using HackRF One *RF and Wireless Systems*

- Built an RF prototype using HackRF One to acquire, analyse, and interpret remotely transmitted temperature signals and identify anomalies.
- Implemented the end-to-end SDR chain – capture, filtering, demodulation, decoding – and validated decoded readings against a reference sensor.

Internships

Bhagwan Parshuram Institute of Technology, GGSIPU Jul 2023 – Aug 2023
Data Analytics Intern New Delhi, India [Certificate](#)

- Analysed institutional datasets in Python and Excel and built KPI dashboards and automated reports, cutting repetitive manual effort by **25%**.

Defence Research and Development Organisation (DRDO) Jul 2022 – Sep 2022
Research and Development Intern India [Certificate](#)

- Supported development, validation, and signal analysis of an embedded wireless sensing prototype, improving reliability and reducing errors.

AGIXURY Sep 2020 – Oct 2020
Web Development Intern Remote [Certificate](#)

- Developed responsive web interfaces from business requirements and improved usability across desktop and mobile layouts.

Education

Masters' Union Aug 2026 – Present
PGP in Applied AI and Agentic Systems Gurugram, India
Bhagwan Parshuram Institute of Technology, GGSIPU 2020 – 2024
B.Tech in Electronics and Communication Engineering CGPA: 8.53/10.0
Faith Academy Senior Secondary School, CBSE 2018 – 2020
Class XII: 92.8% | Class X: 94.2% New Delhi, India

Technical Skills

Programming and Data	Python, SQL, FastAPI, Flask, data analysis, data cleaning, exploratory data analysis
Applied AI	Machine learning, generative AI, agentic AI, large language models, prompt engineering, Retrieval-Augmented Generation (RAG)
AI Systems and Cloud	Vector databases (FAISS), LLMOps, GenAIOps, Microsoft Azure AI, Snowflake, model APIs, data engineering foundations
Analytics and Development Tools	Power BI, Tableau, Advanced Excel, Git, GitHub Actions, Docker, pytest, VS Code
Delivery and Problem Solving	Root-cause analysis, stakeholder communication, process improvement, workflow optimisation, customer-focused problem solving

Selected Certifications

Professional Certificates	Snowflake Generative AI Microsoft Azure AI Essentials Astronomer Data Engineering Foundations
AI Engineering	Become an AI Engineer GenAIOps Foundations Generative AI in Cloud Computing
LLMs and RAG	Fine-Tuning for LLMs Advanced LLMs with RAG Vector Databases and RAG AI Ecosystem for Developers
